

EcoFlush Vessel Installation Instructions
B8100 B8104 B8106

1. Remove porcelain toilet tank by unsecuring the tank bolts
 - a. Located on the underside of the toilet bowl where tank sits
 - b. If water is in base of tank out side black vessel, pour out
2. Gently lay tank on back side
3. Using a pair of pliers, unscrew lower supply nut (white)
4. Remove tank to bowl gasket, set aside as you will need to reuse it.
5. Using pliers and the cartridge removal tool (if needed), remove the large vessel nut. Approximately 2.5" in diameter (white)
6. Remove the Flush Control Valve
 - a. Remove chrome lever by placing flat blade screwdriver between tank and lever, twist. The width of the screwdriver will get the handle past the notch that holds it in place.
 - b. Using pliers remove the Flush Control Valve nut (white)
 - c. Disconnect the long orange & long blue tubes that run from the handle to the center of the main unit. The 2 black tabs will push away from one another (right side to the right, left side to the left)
 - d. Pull back and remove Flush Control Valve from tank
7. Vessel is now free to lift out.
8. Set aside if returning to manufacturer
9. Reverse steps to install the new EcoFlush vessel.
